

Spatial connection to the upslope unit / Talus-connected

Comment:

Episodic development of small glaciers has occurred along with the landform history in the area connecting the talus slopes to the rock glaciers. The current absence of glaciers implies a lack of efficient sedimentary connection with the relevant upslope unit. The rock glaciers are still, however, classified as talus-connected.

Mount Kaçkar range, Turkey
40.8358°N, 41.1425°E
3100-3300 m.a.s.l.
