

Spatial connection to the upslope unit / Glacier-connected

Comment:

Continuity glacier – debris-covered glacier (DCG) - rock glacier. The delimitation between the DCG and the rock glacier section is not feasible without further direct or geophysical prospection. The DCG and the rock glacier have been outlined and slightly colored to make the topographic sequence easier to read.

Tapado, Chile
30.1591°S, 69.9152°W
4300-4700 m.a.s.l
