

# Rock glacier activity / Active

## Comment:

Steep front and lateral margins with both freshly exposed material. The two colors at the front are a good sign for indicating the oversteepening that occurs at the front of many active rock glaciers.

Piz da las Sterlas,  
Switzerland  
46.5130°N, 9.9600°E  
2700-2900 m.a.s.l.
