

Multi-unit rock glacier system

Comment:

Multiple mostly spatially connected and complex units of diverse generations and probably various activity. Whereas the occurrence of a rock glacier system is undoubtedly easy to recognize, the unambiguous determination and characterization of its composing units is a very challenging task.

Tupungato, Argentina
33.1473°S, 69.7207°W
3500-4500 m.a.s.l
